COMBI ANNOUNCES ROBOTIC CASE PACKING AND PALLETIZING SOLUTION

Canton, OH In a collaborative effort, Combi Packaging Systems LLC, a leading provider of customized end of line packaging equipment, and Motion Controls Robotics, a leading provider of robotic automation solutions, today announced a new robotic solution for end of line packaging operations.

"In line with our focus of developing [robotic solutions](#) for end of line packaging operations, we have developed our new [ErgoPakPal](#), a complete case packing and case palletizing system for low to medium throughput applications. The ErgoPakPal packs cases and palletizes the filled cases with one FANUC [M710iC](#) robot. This system provides the perfect solution for operators that are manually case packing and then palletizing cases over multiple shifts. Installing an ErgoPakPal provides a cost savings through the use of a dual functioning robot, the use of minimal floor space and allows for flexibility over permanent robot installations," said John Fisher, CEO and President of Combi Packaging Systems LLC.

See the ErgoPakPal in operation in booth C-3245 at the PackExpo in Las Vegas September 28-30. The collaboration between Combi and Motion Controls will give existing and new customers new, cutting edge technology that will enhance productivity on their case packing lines. Combi and MCRI offer free registration to any current or potential customer to the show here <http://www.combi.com/packexpo-las-vegas-2015>.

About Combi Packaging Systems LLC

Combi Packaging Systems LLC is a leading U.S. manufacturer of end-of-line packaging equipment, with more than 36 years' service in case erectors, case sealers, case packers, tray formers, ergonomic hand-packing stations, robotic case packers and case labelers. Combi Packaging Systems LLC was formed as a joint venture between 3M and The MJ Maillis Group in 1999.

About Motion Controls Robotics

Motion Controls Robotics is a leading provider of robotic automation solutions to food & beverage, plastics, building and construction materials, and board & sheet goods industries since 1995. The company provides innovative robotic solutions from concept to installation and service/support that keep manufacturers competitive for smaller systems and large scale [end-of-line robotic packaging](#), packing/palletizing and handling systems. Motion Controls Robotics offers turnkey solutions and 24/7 service and support. Motion Controls Robotics is an authorized FANUC Robotics Level 4 Certified Servicing Integrator, an RIA Certified Robot Integrator and a SmartCart® Value Added Reseller.
