

Comexi North America appoints Olof Buelens as Vice President

Buelens has a wide experience in sales and service packaging machinery

Charlotte (North Carolina), May 2, 2017. Comexi, specialist in solutions for the flexible packaging industry, is taking part these days in the Flexographic Technical Association (FTA) Annual Forum and Info*Flex in Phoenix. Specifically in this event, the group revealed that has appointed Mr. Olof Buelens as Vice President of Comexi North America Inc. to further strengthen its activities in United States and Canada.

With more than 60 years of experience, Comexi is growing in the US market with a large number of machines installed last year both for flexographic, gravure presses and laminators. During these past years, the group has invested in a local service located in Charlotte, North Carolina (US), from which field-engineering services are offered. Furthermore, Comexi offers spare and wear parts from its US warehouse to ensure 24 hours deliveries to customers. Moreover, customers can take advantage of the 24 hours technical service support in US, Canada and worldwide.

The new Comexi North America Vice President, Olof Buelens, has more than 20 years of experience in sales and service of packaging machinery and has a wide knowledge of the entire packaging and flexible packaging sector. "His primary focus is customer satisfaction and further growth of Comexi in North America", ensures Comexi's CEO, Jeroen van der Meer.

About Comexi - www.comexi.com

Comexi, founded in 1954, has extensive experience in manufacturing equipment for the flexible packaging conversion industry. World leader, is a world class engineering and manufacturing company for machinery for flexible packaging, which runs five product lines, each specialized in a different conversion process: flexography printing, offset printing, rotogravure printing, laminating, slitting and logistic complements.

Based in Girona (Spain) and with 500 employees, has more than 36.000 m2 divided into three production centers in Riudellots de la Selva (Girona, Spain), in Montenegro (Rio Grande do Sul, Brazil) and in Piacenza, (Italy). Furthermore, in order to attend to and give optimum a response to its clients, Comexi has a sale network broadens to more than 100 countries with immediate technical assistance available.

Comexi includes the Manel Xifra Boada Technological Centre where the company provides support and transfers its knowledge to the various groups involved in the flexible printing industry process. As a knowledge driver, CTec services cover several processes of the flexible packaging field and are divided into four areas: consultancy, innovation services, Demo Centre and Industrial Laboratory and training and academic activities.
