

Productivity of Trioplast Group Increases 17% as a Result of Comexi's Retrofitting Service

Services were performed on the flexographic presses, which were acquired by the Swedish company from 2006-2008, to maximize machine performance

Girona, July 3, 2020.- Comexi, a global supplier of solutions for the flexible packaging printing and converting sector, intervenes at its clients' facilities to update their machinery, enlarging equipment lifecycle and increasing its performance. The Swedish company Trioplast Group is one of many which has benefited from the actions performed by the Comexi service department, and has managed to significantly increase its productivity. These interventions combine a deep printing unit maintenance with the implementation of an inking system retrofitting. This service is designed to refurbish machines installed at the factories of Comexi's customers. The machines are modified with some functional and constructive improvements, adapting the technological improvements of last generation machines to those already installed worldwide.

Trioplast Group, founded in 1965, is a leading European company regarding flexible packaging solutions based on polyethylene films. The company is headquartered in Sweden and has plants in Denmark, France, and the Netherlands. Trioplast Group is dedicated to the production of films, bags, and protective foils, and sells its products to a variety of global markets, which includes industry, transport, and hygiene, among others. Between 2006 and 2008, the Swedish company acquired four Comexi flexo presses, two FWs, one FP and one FL, in which the Comexi Service Unit performed a number of maintenance jobs and updates, in order to restore the robustness and effectiveness of printing units, and improve both the performance as well as the outcome of the machines.

"We have increased our productivity by 17%, as the printing speed is higher and production downtime have been reduced," says Dario Simic, the Maintenance and Infrastructure Manager at Trioplast, who emphasizes that after retrofitting "quality has improved, and there is less reworking; printing presses are now optimized and the department can be better planned." Comexi intends to perform new adaptation measures at the Swedish company's facilities, with the aim to implement varied services which have been unachievable, due to the COVID-19 pandemic.

About Comexi – www.comexi.com

Comexi, founded in 1954, has extensive experience in manufacturing equipment for the flexible packaging conversion industry. As a world leader, it operates five product lines, each specialized in a different conversion process: flexography printing, offset printing, laminating, slitting, and digital services. Furthermore, it has a Service and Technical Assistance Business Unit that offers service 24 hours a day, 7 days a week.

The company has two production plants: one in Riudellots de la Selva (Girona, Spain) and another one near the town of Montenegro, in the State of Rio Grande do Sul (Brazil). There are also two offices in Miami (USA) and Moscow (Russia). Moreover, Comexi is represented in more than 100 countries. This commercial network allows us to have proximity to our customers in order to optimally respond to their needs.

Comexi includes the Manel Xifra Boada Technological Centre, Comexi CTec, where the company provides support and shares its knowledge with various groups involved in the flexible printing industry process.
