

## Insight Pack Renews Its Confidence in Comexi with Two New Acquisitions

**The Dominican company, which presently has three machines, has purchased a Comexi SL2 laminator and a Comexi S2 DT slitter**

**Girona, December 2, 2020.-** Comexi, a global supplier of solutions for the flexible packaging printing and converting sector, and Insight Pack International Corporation, a company based in the Dominican Republic that specializes in the production of flexible packaging, have strengthened their strategic alliance with the acquisition by the Dominican company of a Comexi SL2 laminator and a Comexi S2 DT slitter. The purchase of these two machines expands Insight Pack's fleet of Comexi machines. The company already owns a flexographic press, a Comexi laminator, and a Comexi slitter, which were acquired after its founding in 2016.

"When Insight Pack International Corporation began, it did not have sufficient equipment or manpower. With the initial purchase of three Comexi machines, Insight Pack International Corporation trusted us, and from our side, we developed a global project for them," explains José Santiago, Comexi Area Manager for this region. Since its founding, Insight Pack International Corporation has received the advice of Comexi. "We guide Insight Pack International Corporation in fulfilling its daily after-sales service needs, improving its equipment, and training its personnel," says Santiago, who values "the confidence Insight Pack International Corporation has in our equipment and the training services of the Manel Technological Center Xifra Boada, Comexi CTec." For José Santiago, the satisfactory results achieved by the Dominican company demonstrate Comexi's ability to "support clients with little experience until they are able to succeed."

Insight Pack International Corporation, based in Santiago de los Caballeros (Dominican Republic), has specialized flexographic printing equipment for the packaging of various food and beverage products, such as single wrap and pouches for coffee, cookies, and pasta. The company also produces packaging for products in the tobacco sector, which includes pouches for cigar leaves, as well as shrink-wrap coil, among others.

"Despite acknowledging that our staff embraces each challenge and is committed to satisfactorily producing the required results, having Comexi's service during our initial stage of development

and its support heretofore, has been undoubtedly a great consolation for us,” explains Augusto Reyes, president of Insight Pack International Corporation “During our three years in the market, we have become a company on which our clients can depend, and have gradually solely assumed all the challenges and training to provide a high quality service,” Reyes comments, adding “for this reason, we have incorporated a Comexi S2 DT slitter, a machine of high quality, precision and productivity”.

### **The Comexi S2 DT: a cutting-edge slitter**

Federico Gálvez, Technical Director of Insight Pack International Corporation, values that the Comexi S2 DT is “a cutting-edge slitter which has a rotating turret on the winder, allowing for reel removal and replacement without the need cease the process. Furthermore, it allows speeds of 500 m/min to be reached, thus feeding our increasingly productive line of pouches, and accelerating the completion of products, which require reel delivery from our customers.”

The Comexi S2 DT is a machine created to simultaneously provide high productivity and high flexibility. Presently, there are more than 100 Comexi S2 DT slitters in the market, offering high versatility in reference to the range of materials. Regarding this slitter, quality and quantity are not incompatible. As a result of acceleration ratios, high productivity is achieved through obtaining high speeds at a rapid rate. Operating the Comexi S2 DT is extremely easy and intuitive, due to the enormous work that has been done to offer a pleasant, comfortable, and agile interface.

### **The Comexi SL2: the perfect solution for solvent-free lamination**

Federico Gálvez highlights that the bilaminate and trilaminate structures "are increasingly in demand by the market, which forces us to maximize our lamination capacity, hence allowing us to meet the high number of purchase orders we receive." To meet this objective, Insight Pack International Corporation has incorporated a Comexi SL2 laminator "with excellent performance, as well as easy operation and maintenance for solvent-free laminations, for both short and medium runs". This machine has been designed to comply with productivity concepts and operates with simplicity. The Comexi SL2 has an extremely intuitive environmental nuance and an exclusive applicator head design, which consists of complete motorization, the use of metering sleeves, and the option of incorporating automatic change turrets.

About Comexi – [www.comexi.com](http://www.comexi.com)

Comexi, founded in 1954, has extensive experience in manufacturing equipment for the flexible packaging conversion industry. As a world leader, it operates five product lines, each specialized in a different conversion process: flexography printing, offset printing,

laminating, slitting, and digital services. Furthermore, it has a Service and Technical Assistance Business Unit that offers service 24 hours a day, 7 days a week.

The company has two production plants: one in Riudellots de la Selva (Girona, Spain) and another one in Montenegro, in the State of Rio Grande do Sul (Brazil). There are also two offices in Miami (USA) and Moscow (Russia). Moreover, Comexi is represented in more than 100 countries. This commercial network allows us to have proximity to our customers in order to optimally respond to their needs.

Comexi includes the Manel Xifra Boada Technological Centre, Comexi CTec, where the company provides support and shares its knowledge with various groups involved in the flexible printing industry process.
