

## **Comexi strengthened its business at FPA 2016 Fall Executive Conference in Chicago**

CEO Jeroen Van der Meer, business development manager, Miquel Salvà, and Rotogravure Business Manager, Gian Vito Schiavi, attended the FPA Fall Conference in Chicago where they had the opportunity to meet many of Comexi's clients. During the conference, impressions were given about Comexi North America's great results.

The event was held at the Radisson Blue Hotel, where the management team discussed with their customers' ways of exploring new business opportunities, as well as work with new potential clients for upcoming business deals.

Furthermore, Comexi is extremely happy with the positive feedback regarding its featured product, the F1. "Our clients are very interested in our new product and it was a pleasure to answer all their questions," said Miquel Salvà.

F1 is focused on large formats and markets that required high performance as in the case of the US. The new printer features automation in the printing process, which is capable of changing various sleeves involved during printing. Comexi's high level of efficiency has led it to become one of the leading companies in innovation in the field of flexible packaging.

The conference had great speakers with interesting topics. Comexi had significant exposure where detailed information was provided to all attendees. Miquel Salvà, Jeroen Van der Meer and Gian Vito Schiavi also shared their experiences with Comexi's business partners. "We really appreciate the Flexible Packaging Association's effort in inviting everyone to this biannual conference. It's definitely a great opportunity to meet our clients and potential customers," Salvà expressed.

Comexi wants to further strengthen its presence in the US market in the coming years, not only with flexible printers, but also with offset ones that have innovative and proven Comexi central drum technology, rolling equipment and slitting; in addition to applications developed by the group, e.g., the high in demand Cingular Laser, which improves the finish and added value of

packaging. “Our priority is to be behind of our clients taking care of their needs,” explained Salvà.

**About Comexi - <http://www.comexi.com>**

Comexi has extensive experience in manufacturing equipment for the flexible packaging conversion industry. World leader, it runs five product lines, each specialised in a different conversion process: flexography printing, offset printing, rotogravure printing, laminating, slitting and logistic complements.

Comexi includes the Manel Xifra Boada Technological Centre where the company provides support and transfers its knowledge to the various groups involved in the flexible printing industry process. The company has more than 36,000 sqm. distributed over three production centres in Riudellots de la Selva (Girona, Spain), Brazil and Italy. Furthermore, its widespread sales network extends to more than 100 countries, providing an answer to all its client's needs.
