

## **Jiménez Godoy Acquires a Second Comexi Offset CI8 Press for Its Facility in Murcia (Spain)**

**The many advantages of this investment include allowing the Spanish company to increase its production volume and attract new clients**

**Girona, May 5, 2021.-** Comexi, a specialist in solutions for the flexible packaging printing and converting industry, and Jiménez Godoy, a company specializing in the printing of labels, magazines, catalogues, brochures, and flexible packaging, have reached an agreement for the Spanish company to acquire a Comexi Offset CI8. This is the second Comexi offset press purchased by Jiménez Godoy, and will be installed at the company's facilities in Murcia.

"In recent years we have experienced significant growth, partly due to the purchase of our first Comexi Offset CI8. The acquisition of a second offset press will allow us to increase production volume and offer our clients productive security, which will simultaneously attract other companies," explains Francisco Jiménez, managing director of Jiménez Godoy. From the moment the company acquired a CI8 Offset machine, he has been especially satisfied with the service offered by Comexi. "Continuous collaborative growth with an experienced company such as Comexi is our objective".

The Comexi Offset CI8 press is the result of combining the advantages of offset variable size printing with central drum technology. It is the best solution for short and medium size runs, embraces the demand of time to market and printing quality, reduces operative cost, and has less of an environmental impact. This machine has much faster changeover times in comparison to other conventional technologies. Furthermore, the Comexi Offset CI8 provides maximum flexibility through the combination of multiple SKUs within the same print job, which reduces changes and waste.

The offset central impression printing technology is a two-fold environmentally responsible option, as print is done without solvents and frontal printing, with EB (Electron Beam) protective varnishes, allows for the replacement of laminated products or the reduction of the number of layers due to the capabilities of chemical, thermal, and scratch resistance of EB lacquers. Effectively, this facilitates the sealing of monofilm products and the recycling of packaging solutions, all this guaranteeing the highest quality. The EB curing system consumes low energy and provides high productivity, with low migration inks and low odour.

“Comexi's central drum offset printing allows to be faster, regarding both prepress and job changeover. The cost of prepress is considerably lower than other conventional printing technologies, as a new job can be executed in less than two hours, and an entire set of 7 plates can be accomplished in under 20 minutes,” says Felip Ferrer, the Offset Brand Manager of Comexi's Printing Business Unit.

Jiménez Godoy is a Spanish family business with over 50 years of experience in the printing and graphic arts sector. The company is dedicated to printing a vast range of plastic and paper products, such as labels, catalogues, leaflets, and flexible packaging for various industries, which includes food, pharmaceutical, and entertainment.

About Comexi – [www.comexi.com](http://www.comexi.com)

Comexi, founded in 1954, has extensive experience in manufacturing equipment for the flexible packaging conversion industry. As a world leader, it operates five product lines, each specialized in a different conversion process: flexography printing, offset printing, laminating, slitting, and digital services. Furthermore, it has a Service and Technical Assistance Business Unit that offers service 24 hours a day, 7 days a week.

The company has two production plants: one in Riudellots de la Selva (Girona, Spain) and another one in Montenegro, in the State of Rio Grande do Sul (Brazil). There are also two offices in Miami (USA) and Moscow (Russia). Moreover, Comexi is represented in more than 100 countries. This commercial network allows us to have proximity to our customers in order to optimally respond to their needs.

Comexi includes the Manel Xifra Boada Technological Centre, Comexi CTec, where the company provides support and shares its knowledge with various groups involved in the flexible printing industry process.
