

Comexi Consolidates Its Presence in the Swiss Market with the Sale of an L20000 Laminator

The acquisition of this machine enables Primcut AG, a company specializing in the manufacture of labels and banderoles, to meet increased demand

Girona, August 17, 2022.- Comexi, a specialist in solutions for the flexible packaging printing and converting industry, is consolidating its leadership position in the highly competitive Swiss market as a result of the sale of an L20000 laminator to Primcut AG. The acquisition of this machine enables the Swiss company, which specialises in the manufacturing of labels and banderoles, to cope with a sharp demand increase. This sale is in addition to other acquisitions during 2021 in Switzerland, including those of an F2 MB flexo press, a Comexi S1 DT slitter with laser, and a robotisation for a slitter.

"The Comexi L20000 is a water-based laminator that minimises waste at the start of a job, an essential benefit to address the growing trend of short runs, which is cost saving and reduces environmental impact," explains Ramon Jonama, Comexi's Area Manager in this region. "Primcut AG prints on narrow webs, and the Comexi L20000 will allow the company to make laminations and coatings to meet the increase in demand", emphasises Jonama, who adds that "we are very pleased with the results obtained in Switzerland, where we have been consolidating our leadership position due to our sales in recent months".

Primcut AG is a specialist printing company for international customers in the industry of flexible packaging, labels, banderoles, and tickets. Founded in 2008 in Krummenau, the company relocated to Neu St.Johann in 2019, the present location of its headquarters.

In response to increasing market demands for short run production, the design of the Comexi L20000 laminating machine is based on concepts associated with time-to-market, productivity, profitability, and sustainability. As a result of the machine's high energy drying efficiency, minimum waste, extreme web tension control precision, and reverse application system, which is specifically for water-based adhesives, the Comexi L20000 is the optimal solution in combination with digital printing or other narrow web printing systems, such as those used by Primcut AG. It is an extremely compact machine with a fully automated washing system that allows adhesive changes in less than 10 minutes, thus boosting productivity.

About Comexi – www.comexi.com

Comexi, founded in 1954, has extensive experience in manufacturing equipment for the flexible packaging conversion industry. As a world leader, it operates six product lines, each specialized in a different conversion process: flexography printing, offset printing, digital printing, laminating, slitting, and digital services. Furthermore, it has a Service and Technical Assistance Business Unit that offers service 24 hours a day, 7 days a week.

The company has two production plants: one in Riudellots de la Selva (Girona, Spain) and another one in Montenegro, in the State of Rio Grande do Sul (Brazil). There are also two offices in Miami (USA) and Moscow (Russia). Moreover, Comexi is represented in more than 100 countries. This commercial network allows us to have proximity to our customers in order to optimally respond to their needs.

Comexi includes the Manel Xifra Boada Technological Centre, Comexi CTec, where the company provides support and shares its knowledge with various groups involved in the flexible printing industry process.
