

ICE 2017 Exhibition Munich Germany

Next to Euromac's outstanding Slitter Rewinder engineering reputation, the perfect espresso coffee and local Barbera wine are served on their booth at **ICE 2017** in Munich.

2017 also inaugurates the company's 50 years anniversary, therefore Euromac s.r.l. showcases one of the newborns, the high-end duplex TB3-M (movable rewind shafts) series which consists of a new rewind section combining a variation of rewind advantages.

Euromac innovated and improved all their duplex series variations and from this research initiated the development of a new line consisting of horizontally moveable contact rollers, where the rewind diameter is guiding the rewind shafts and the shaft support arms. For excellent tension controls and roll geometry.

The rewind section of the TB3-M has a short and direct web path from slitting section to rewind, in which constant gap rewinding is one of the many possibilities, which also include running different rewind diameter on superior and inferior rewind shafts.

The Machine showcased at the **ICE EUROPE 2017** is the **TB3.08M** with rewind diameter up to 850 mm and maximum working speed up to 800 m/min. There are various other innovations like a new automatic knife unit with millimetric depth adjustment and much more. Next to this, many other innovations can be seen in **Hall A6 stand 484**.
