

# THE INNOVATION DRIVE

January 27, 2014

## Interpack booth: HALL 6 STAND D31

**When FlexLink for the first time participate together with Coesia companies at Interpack, visitors will experience additional and innovative solutions for automated production. The key topics are innovation and line efficiency.**

The 2,000 m<sup>2</sup> large Coesia booth will be the place where customer demands meets innovation. FlexLink will showcase the success of last year, the X65 conveyor platform designed for low friction, low power consumption and a long service life. It is capable of speeds at 120 m/min and ready for tomorrow's requirements on reduced cost per produced unit. Read more about X65 [here](#) .

"The show will also be the global launch of a new, innovative extension to our present offer, suited for the food and fast moving consumer goods industries. Feedback from field test tells us the new product will set radically new standards" - says Viktor Hermanson, Marketing Manager at FlexLink.

"We are also for the first time showing the latest development in high capacity balancing of production flows. The new DMT™ technology, for diverting, merging and balancing flows at as high rates as 1000 products per minute, is capable of handling a large variety of products. The balancing is made in a continuous motion, gentle also for sensitive products and with substantial improvements on the line throughput. The cream of the cake is that changeovers between different product sizes are practically eliminated" – Viktor Hermanson continues.

At the booth, FlexLink will showcase Youtilize®, the production efficiency toolbox. Youtilize is a suite of functions helping operators, production engineers and management to improve production efficiency by monitoring lines, conveyors and equipment in real time. It provides accurate measures on efficiency, fact based data on bottlenecks and root causes – all necessary for minimizing the total cost of ownership.

Our engagement in Interpack 2014 is the largest so far – bringing state-of-the-art production flow solutions aimed for supporting our customers meeting the market challenges. FlexLink launches new products and solutions regularly, year on year, for higher production efficiency and 2014 is not an exception" - Viktor Hermanson concludes.
