

SMI offers complete bottling & packaging lines featuring innovative technical solutions that **reduce manufacturing costs**, **increase energy savings** and **streamline the efficiency of the plant**.

SMI cutting-edge machines for the primary, secondary and tertiary packaging are designed and manufactured according to the new **ERGON** conceptual platform, where ergonomics and advanced machines integration enable to offer *cost-saving* bottling lines made up of only 2 compact systems:

- **ECOBLOC® system**, gathering stretch-blow moulding, filling and capping (on request also labelling) for primary packaging ("wet packaging");
- **PACKBLOC system**, combining an automatic packer and a two-Cartesian-axis automatic palletization system for both the secondary and end-of-line packaging ("dry packaging").

If compared to traditional bottling plants made up of more "stand-alone" machines, the cost-saving compact lines proposed by SMI ensure:

- **lower initial investment and space reduction:** the two highly-integrated compact systems allow the reduction of conveyor belts connecting the machines;
- **lower personnel costs:** a cost-saving line can be run and controlled by a reduced number of operators (in particular cases by one operator only);
- **fewer interventions of machine maintenance and cleaning and lower consumption of spare parts:** the two compact multi-functional units simplify these operational aspects;
- **energy costs cutting:** only high-efficiency and low consumption motors are used.

For further information about SMI's cost-saving compact lines please contact our sales department at +39 0345 40111 or write an e-mail at info@smigroup.it.
